

BTS Spark™ Ignite Your Futures Trading

Introducing a futures trading system built to meet the demands of today's markets

Building on extensive options software experience, Blue Trading Systems has applied its commitment to engineering excellence to create a futures spreader designed for optimal functionality, speed and reliability. It addresses the shortcomings of currently available alternatives, and will be enhanced in fast release cycles to respond quickly to changing industry conditions. It is supported by a responsive team with one goal: complete customer satisfaction.

BTS Spark features include:

- A consistently fast platform with API access
- A robust, efficient futures front end interface
- An ultra-low latency, highly functional spreader and algo platform
- Support of all CME instruments, other exchanges to be supported soon
- Collocation on either shared or private servers
- FPGA hardware accelerated versions

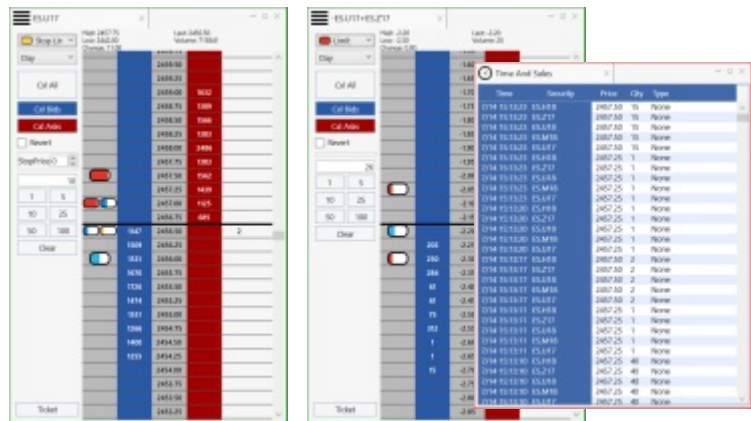

User interface facilitates efficient trader workflows

Our intuitive UI is designed to help you to zero in on opportunities and execute consequent trades naturally. Our tools provide a solid technological foundation for Futures Commission Merchants, Proprietary Trading Groups, and Brokers alike, with a view toward streamlining trading workflow.

Our user interface allows you to:

- Perform important operations with the fewest possible clicks
- Configure unlimited layouts on as many monitors as you wish
- Display up to 50 concurrent futures interface windows
- Organize your space with tabbed windows
- Maintain a consistent market data rate even in extreme market conditions

The Game Has Changed. Make Your Move.™

BTS Spark spreader provides better fill quality

Our considerable experience providing options market-making systems has shown us that speed and flexibility are paramount, and that traders should control the timing of update releases. Our system was built to easily incorporate new features while maintaining latency profiles necessary to compete in today's electronic derivatives markets.

Our ultra low latency spreader includes:

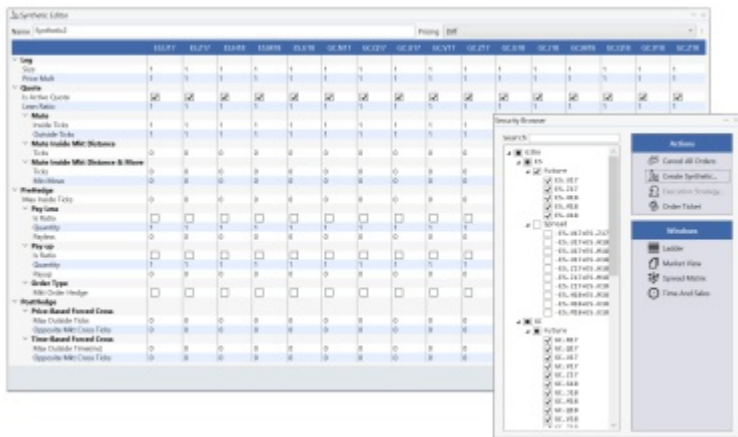

- Tick to re-quote times measured in microseconds
- The ability to create complex synthetic spreads with unlimited working legs
- An algorithm library built on our dynamic algo fabric
- Pre-quote throttles to mitigate exchange messaging
- Pre-hedge rules to manage leg risk
- Post-hedge functions to work a more advantageous hedge price

BTS Spark™ {API}

BTS Spark API allows simple, clean extension and customization

Our BTS Spark API provides simple, powerful ways to extend our product. We generate .NET and C++ wrappers over our core C API with the following end points:

- Synthetic Spread Creation: Create a complex synthetic spread with applicable execution parameters and rules
- Market data: Subscribe to the full depth of book for a future listed spread and synthetic spreads
- Orders: Send orders for futures, listed spreads and synthetic spreads
- Trades: Subscribe to trade feeds to receive notification on fills and orders
- Excel integration through RTD
